Linguistics: Program-level student learning outcomes

Upon completion of a Linguistics major at the University of Oregon, a student should be able, given appropriate data, to:

Perform basic acoustic analyses of recorded speech sounds

Discover the phoneme inventory and basic phonotactic structure in a sufficiently large set of phonetically transcribed words

Analyze the morphological and syntactic constructions in a sample of glossed linguistic data

Design a laboratory or field research project in some area of linguistics

Read and demonstrate an understanding of current research literature in areas of linguistics taught in our program.
